In the coming months, you’re going to see a new look for V-Go. We’re upgrading the packaging to make it more user friendly and appealing, while also making subtle modifications to the V-Go device for future use.

**Changes with you in mind**

V-Go packaging has been updated to more clearly display information and ensure patients get exactly what they need—making it easier for you, your patients, and the pharmacist.
V-Go® IS STILL THE SAME, SIMPLE, ALL-IN-ONE DEVICE

Although there are some minor changes on the outside, there is no change in how V-Go works or is used.

Here’s what you may notice
• Raised bumps that correspond with basal rate dose
• Small notches at the base and top

Be assured that V-Go still ...
• Works the same way
• Is waterproof¹
• Optimizes delivery for better glycemic control²

We’re keeping your patients informed. The updated packaging includes a patient insert explaining that V-Go still works the same way patients have always used it.

For any questions regarding the newly designed V-Go, contact V-Go Customer Care at 866-881-1209.

Important Risk Information: If regular adjustments or modifications to the basal rate of insulin are required in a 24-hour period, or if the amount of insulin used at meals requires adjustments of less than 2-Unit increments, use of the V-Go Wearable Insulin Delivery Device may result in hypoglycemia. The following conditions may occur during insulin therapy with V-Go: hypoglycemia (low blood glucose) or hyperglycemia (high blood glucose). Other adverse reactions associated with V-Go use include skin irritation from the adhesive pad or infections at the infusion site. V-Go should be removed before any magnetic resonance imaging (MRI) testing.
